

MOHAMED ADEEP

DevOps Engineer

7904890057 | mohamedadeep005@gmail.com | md-adheep.github.io | [Md-Adheep](#)

PROFESSIONAL SUMMARY

- Result-oriented DevOps Engineer with 2.5+ years of hands-on experience implementing and supporting cloud-based DevOps solutions, with a strong focus on improving application reliability, scalability, and deployment efficiency.
- Experienced in supporting 5+ enterprise applications, 15+ CI/CD pipelines, 4 environments, and 15+ microservices across development, QA, staging, and production environments.
- Hands-on expertise in AWS services including EC2, S3, IAM, VPC, CloudWatch, Auto Scaling, Elastic Load Balancing, RDS, DynamoDB, Route 53, and EKS, supporting secure, scalable, and highly available cloud environments.
- Skilled in designing and managing CI/CD pipelines using GitHub Actions and Jenkins, automating build, test, deployment, and release processes across development, staging, and production environments.
- Strong knowledge of Infrastructure as Code (IaC) using Terraform and configuration management using Ansible, enabling repeatable, consistent infrastructure provisioning.
- Experienced in Docker containerization and Kubernetes orchestration with Helm, creating and managing containerized application environments to support efficient, low-downtime deployment workflows.
- Proficient in Git and GitHub for source code management, branching strategies, and collaborative development practices, integrating repositories with CI/CD pipelines to enable continuous integration and continuous delivery.
- Skilled in implementing AWS monitoring and logging using CloudWatch, alongside Prometheus and Grafana, including metrics, alarms, and dashboards to identify performance issues and improve system availability.
- Experienced in troubleshooting deployment failures, infrastructure issues, and CI/CD pipeline failures through systematic root cause analysis and log analysis.
- Strong understanding of DevOps practices, SDLC, Agile methodologies, continuous integration, continuous delivery, release management, and environment management.
- Hands-on exposure to Linux administration and shell scripting, including system monitoring, file management, process management, and service management, along with Plesk and Nginx reverse proxy and load balancing.
- Experienced in integrating DevSecOps practices — SonarQube, GitLeaks, and Trivy — into CI/CD pipelines for code quality checks, secrets detection, and vulnerability scanning.
- Knowledge of CI/CD security and AWS IAM best practices, including role-based access, least-privilege permissions, and secure deployment practices.
- Experienced in collaborating with developers and cross-functional teams to streamline development and deployment processes and ensure smooth application releases.
- Strong analytical, troubleshooting, and problem-solving skills, with a continuous-learning mindset toward AWS DevOps, cloud automation, infrastructure as code, container orchestration, and modern DevOps technologies.

PROFESSIONAL EXPERIENCE

Tata Consultancy Services (TCS) — DevOps Engineer

Mar 2025 – Present

Enterprise Application Deployment & Cloud Automation Platform

Enterprise Software / IT Services

- Designed and maintained 15+ CI/CD pipelines using Jenkins, Git, GitHub, and GitLab, automating application builds, testing, validation, and deployments across 4 environments and standardizing releases while reducing manual release effort.
- Managed AWS infrastructure supporting 5+ applications across Dev, QA, Staging, and Production using EC2, VPC, IAM, S3, and CloudWatch, with standardized, least-privilege access across environments.
- Developed and managed 10+ reusable Terraform modules for consistent, repeatable AWS environment provisioning, cutting new-environment setup time by 70%.
- Containerized and deployed 15+ microservices using Docker and Kubernetes/Amazon EKS, improving deployment consistency and enabling independent service scaling.
- Managed Kubernetes resources including Deployments, Services, Ingress, ConfigMaps, Secrets, Namespaces, and RBAC across EKS workloads.
- Automated server configuration, application setup, and operational tasks across 20+ Linux servers using Ansible, Bash, and Python, reducing manual provisioning effort by 60% and saving 8 hours per week.
- Implemented Prometheus, Grafana, and CloudWatch monitoring for 20+ infrastructure and application components, achieving 40% faster issue detection and reducing mean time to resolution.
- Implemented centralized logging using the ELK Stack, reducing incident investigation time by 50%.
- Integrated SonarQube, GitLeaks, and Trivy into CI/CD pipelines, enforcing automated code-quality and security gates and reducing vulnerabilities reaching production by 35%.
- Implemented rolling and blue-green deployment strategies, enabling controlled releases with minimal downtime and safer rollbacks.
- Supported 10+ production deployments per month, troubleshooting CI/CD failures, Kubernetes issues, and infrastructure problems through root-cause analysis while maintaining a 95% deployment success rate.

Tata Consultancy Services (TCS) — Junior DevOps Engineer

Mar 2024 – Feb 2025

- Designed and maintained 10+ Jenkins CI/CD pipelines using Git and GitHub to automate application builds, validations, and deployments for banking applications, reducing manual deployment steps.
- Managed AWS infrastructure across Dev, QA, Staging, and Production using EC2, VPC, IAM, S3, and CloudWatch.
- Containerized and deployed 10+ banking microservices using Docker and Kubernetes/Amazon EKS, improving release consistency across environments.
- Provisioned AWS infrastructure using Terraform, enabling repeatable environment deployments and reducing manual setup time by 60%.
- Configured 10+ Helm-based application releases using ConfigMaps, Secrets, Ingress, and RBAC, standardizing Kubernetes deployments and reducing release configuration errors.
- Automated server configuration, patching, and application setup across 15+ Linux servers using Ansible and shell scripting, reducing manual effort by 50%.
- Integrated DevSecOps checks into CI/CD workflows for automated code-quality validation, secret detection, and vulnerability scanning before release.
- Implemented Prometheus, Grafana, and CloudWatch monitoring for application and infrastructure health, enabling earlier detection of performance and availability issues.
- Supported centralized logging and log analysis for 10+ production deployments per month, assisting with troubleshooting and root-cause analysis.
- Collaborated with development and operations teams to resolve CI/CD failures, Kubernetes issues, infrastructure problems, and deployment-related incidents.

TECHNICAL SKILLS

Cloud Platform: AWS (EC2, S3, IAM, VPC, RDS, ELB, Auto Scaling, CloudWatch, EBS, Route 53)

DevOps & CI/CD: Jenkins, GitHub Actions, AWS CodePipeline, AWS CodeBuild, AWS CodeDeploy, Git, GitHub

Infrastructure as Code: Terraform, AWS CloudFormation

Configuration Management: Ansible

Containerization: Docker, Docker Hub, Amazon ECR

Container Orchestration: Kubernetes, Amazon EKS

Scripting & Programming: Python, Bash/Shell Scripting, YAML, JSON

Operating Systems: Linux (Ubuntu, Amazon Linux), Windows

Version Control: Git, GitHub, Git branching, Pull Requests, Merge Strategies

Build & Package Management: Maven, npm

Monitoring & Logging: AWS CloudWatch, CloudWatch Logs, CloudWatch Alarms, CloudWatch Dashboards

Networking: VPC, Subnets, Route Tables, Internet Gateway, NAT Gateway, Security Groups, NACLs, DNS, Load Balancing

Security: AWS IAM, IAM Roles & Policies, Secrets Management, SSH, Least-Privilege Access

Databases: Amazon RDS, MySQL, SQL

Artifact & Storage Management: Amazon S3, Amazon ECR, AWS Artifact Repositories

DevOps Automation: CI/CD Pipeline Automation, Infrastructure Provisioning, Deployment Automation, Environment Management

Testing & Quality Integration: Build Validation, Deployment Verification, Smoke Testing, Health Checks

Project Management: JIRA, Confluence

Methodologies: Agile Scrum, Sprint Planning, Daily Stand-ups, Sprint Reviews, Retrospectives

Others: Linux Administration, Application Deployment, Release Management, Log Analysis, Root Cause Analysis, Performance Monitoring

CERTIFICATIONS & TRAINING

AWS re/Start Program

Jul 2025 – Aug 2025

- Completed the AWS re/Start Program, developing practical expertise across AWS cloud services, infrastructure, networking, security, and deployment while strengthening cloud implementation and troubleshooting capabilities.

EDUCATION

HKRH College, Affiliated to Kamaraj University

Bachelor of Science — Computer Science

May 2022 – May 2025

Theni, Tamil Nadu
