

MOHAMED ADEEP

DevOps Engineer

7904890057 | mohamedadeep005@gmail.com | md-adheep.github.io | [Md-Adheep](#)

Professional Summary

- DevOps Engineer with 2.5+ years of hands-on experience implementing, maintaining, and continuously improving CI/CD platforms, cloud infrastructure, and automation frameworks, with a strong passion for automation and operational excellence.
- Hands-on with CI/CD pipeline design and delivery using Jenkins, GitLab CI, GitHub Actions, and Git-based review workflows (Gerrit), building scalable, secure, and fully automated build, test, and release pipelines.
- Strong understanding of cloud-native architecture – Kubernetes, microservices, Ingress/API gateway, and service mesh concepts – running containerized workloads in production.
- Production experience with containerization and orchestration using Docker, Kubernetes, Amazon EKS, and Helm to drive standardization, scalability, and low-downtime deployments.
- Experienced with GitOps practices and continuous delivery tooling (Argo CD, Flux CD) for declarative, version-controlled application delivery and safe rollbacks.
- Skilled in monitoring, observability, and reliability engineering using Prometheus, Grafana, CloudWatch, and the ELK Stack – metrics, dashboards, alerting, and centralized logging.
- Strong scripting and workflow automation in Python and Bash, proactively eliminating manual processes to improve efficiency, security, and scalability.
- Embeds security, compliance, and governance into CI/CD using SonarQube, GitLeaks, and Trivy, alongside AWS IAM least-privilege and secure deployment practices.
- Tracks and reports DevOps KPIs – deployment frequency, lead time, and change failure rate – to drive continuous improvement and operational excellence.
- Collaborates with cross-functional development, operations, and architecture teams; translates requirements into user stories, contributes to architecture reviews and governance, and supports onboarding through documentation and mentoring.
- Continuous-learning mindset toward emerging DevOps technologies including Argo CD, Flux CD, service mesh, FinOps tooling, and Go.

Professional Experience

Tata Consultancy Services (TCS) – DevOps Engineer

Mar 2025 – Present

Enterprise CI/CD Platform & Cloud Automation (promoted from Junior DevOps Engineer) Enterprise Software / IT Services

- Implemented and maintained 15+ scalable, secure, automated CI/CD pipelines using Jenkins, GitLab CI, GitHub Actions, and Git across 4 environments, standardizing releases and reducing manual release effort.
- Championed containerization and orchestration best practices with Docker, Kubernetes/Amazon EKS, and Helm, deploying 15+ microservices with consistent, repeatable releases and independent service scaling.
- Introduced GitOps-based continuous delivery using Argo CD for declarative, version-controlled deployments to Kubernetes, improving release traceability and rollback safety.
- Built and managed 10+ reusable Terraform modules and self-service infrastructure templates for consistent AWS environment provisioning, cutting new-environment setup time by 70%.
- Implemented advanced monitoring, logging, and observability with Prometheus, Grafana, CloudWatch, and the ELK Stack across 20+ components, achieving 40% faster issue detection and reducing mean time to resolution.
- Reduced incident investigation time by 50% through centralized logging and structured log analysis, improving overall system reliability.
- Embedded security, compliance, and governance gates into CI/CD with SonarQube, GitLeaks, and Trivy, reducing vulnerabilities reaching production by 35% and enforcing least-privilege IAM.
- Identified inefficiencies in DevOps workflows and automated manual processes across 20+ Linux servers using Ansible, Bash, and Python, reducing manual effort by 60% and saving 8 hours per week.

- Tracked DevOps KPIs – deployment frequency, lead time, and change failure rate – supporting 10+ production deployments per month at a 95% deployment success rate.
- Implemented rolling and blue-green deployment strategies for controlled, low-downtime releases with safe rollbacks.
- Collaborated with development, operations, and architecture teams; contributed to architecture reviews and governance, and enabled new team members through documentation and hands-on mentoring on CI/CD practices.

Tata Consultancy Services (TCS) – Junior DevOps Engineer

Mar 2024 – Feb 2025

Digital Banking & Payment Services Platform (joined while in college)

Banking Domain

- Designed and maintained 10+ Jenkins CI/CD pipelines with Git and GitHub to automate build, validation, and deployment for banking microservices, reducing manual deployment steps.
- Containerized and deployed 10+ banking microservices on Docker and Kubernetes/Amazon EKS, improving release consistency across environments.
- Configured 10+ Helm-based releases with ConfigMaps, Secrets, Ingress, and RBAC, standardizing Kubernetes deployments and reducing release configuration errors.
- Provisioned AWS infrastructure with Terraform for repeatable environment deployments, reducing manual setup time by 60%.
- Integrated DevSecOps checks – code-quality validation, secret detection, and vulnerability scanning – into CI/CD to meet security, compliance, and governance requirements before release.
- Implemented Prometheus, Grafana, and CloudWatch monitoring with centralized logging, improving early detection of performance and availability issues.
- Automated server configuration, patching, and application setup across 15+ Linux servers using Ansible and shell scripting, reducing manual effort by 50%.
- Collaborated with cross-functional development and operations teams to gather requirements, resolve CI/CD and Kubernetes issues, and support production deployments.

Technical Skills

CI/CD Platforms: Jenkins, GitLab CI, GitHub Actions, Gerrit, AWS CodePipeline, AWS CodeBuild, AWS CodeDeploy

GitOps & Continuous Delivery: Argo CD, Flux CD, GitOps workflows, Release Management

Containers & Orchestration: Docker, Docker Hub, Amazon ECR, Kubernetes, Amazon EKS, Helm

Cloud-Native Architecture: Microservices, Ingress / API Gateway, Service Mesh (Istio – concepts), RBAC, Namespaces

Cloud Platform: AWS (EC2, S3, IAM, VPC, RDS, ELB, Auto Scaling, CloudWatch, EBS, Route 53)

Infrastructure as Code: Terraform (reusable modules), AWS CloudFormation

Configuration Management: Ansible

Monitoring & Observability: Prometheus, Grafana, AWS CloudWatch (Logs, Alarms, Dashboards), ELK Stack

Security, Compliance & Governance: SonarQube, GitLeaks, Trivy, AWS IAM Roles & Policies, Secrets Management, Least-Privilege Access, SSH

Scripting & Programming: Python, Bash / Shell Scripting, YAML, JSON, Go (learning)

DevOps KPIs & Metrics: Deployment Frequency, Lead Time for Changes, Change Failure Rate, MTTR (DORA metrics)

Version Control: Git, GitHub, GitLab, Gerrit, Branching, Pull / Merge Requests, Code Review

Operating Systems: Linux (Ubuntu, Amazon Linux), Windows

Ways of Working: Agile Scrum, Backlog & User Story Management, Architecture Reviews, Documentation, Mentoring, Cross-Functional Collaboration

Emerging / Learning: FinOps & Cloud Cost Tooling, Service Mesh, Go

Others: CI/CD Pipeline Automation, Infrastructure Provisioning, Deployment Automation, Environment Management, Log Analysis, Root Cause Analysis, Performance Monitoring

Certifications & Training

AWS Certified Cloud Practitioner

Sep 2025

- Validated foundational knowledge of AWS cloud services, security, architecture, pricing, and support.

AWS re/Start Program

Jul 2025 – Aug 2025

- Completed the AWS re/Start Program, building practical expertise across AWS cloud services, infrastructure, networking, security, and deployment, and strengthening cloud implementation and troubleshooting capabilities.

Education

HKRH College, Affiliated to Kamaraj University

Bachelor of Science – Computer Science

May 2022 – May 2025

Theni, Tamil Nadu
